1. Required data

Setting up a PPTP connection on Windows XP works as follows.

You need the following data from your VPN details that can be found in your Shellfire QuickAccess customer center:

- server address
- username
- password

The server address is the address of the Shellfire Server used for connection. Username and password are required for authentication with the PPTP server.

Navigation note: How to find your VPN details

- www.shellfire.net
- Log in to using your customer id or your e-mail address and your password
- Open the QuickAccess customer center bar
- Click on your VPN id
- Your VPN details show up with the required data

Warning: Username and password for your PPTP connection are not the same as the ones for your Shellfire website account!

Warning: In case your VPN is not currently set to PPTP, you have to change the VPN type to PPTP from your customer center, first.

2. Setting up your connection

Connecting to a PPTP VPN with Windows Vista does not require any additional software other than Service Pack 3 (SP3) to be installed. You only need a working internet connection.

Follow these steps:

- 1) Start -> Control panel

- 2) Network and Internet Connections

9)

- a. If you created a shortcut on your desktop, you can just double-click it now.

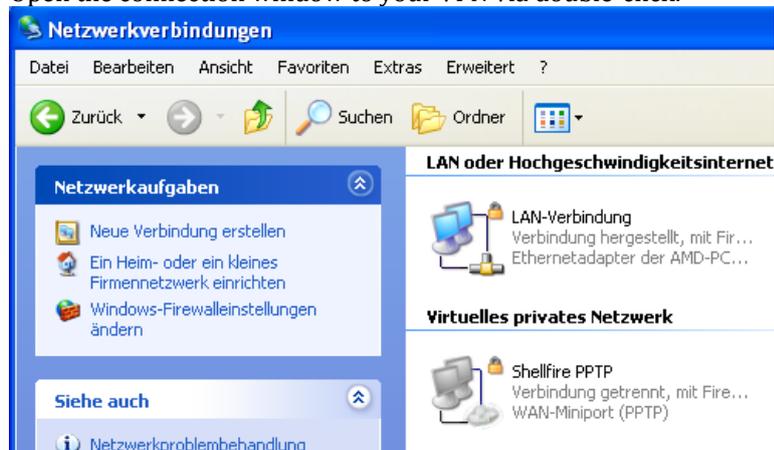

- b. If you did create a shortcut, click on the window "Network and Internet connections" and choose "My Network Places".

Next, click on "View Network Connections" on the left of the screen.

Open the connection window to your VPN via double-click.

3. Connecting / disconnecting

After rebooting your Computer or after being disconnected from the internet, the VPN connection usually disconnects and has to be reconnected.

To connect, follow these steps:

- 1) If you have created a desktop shortcut, just double-click it.

- 2) If you did create a shortcut
 - a. click on the window "Network and Internet connections" and choose "My Network Places"

- b. Next, click on "View Network Connections" on the left of the screen

BIC: DEUTDE33HAN

- c. Open the connection window to your VPN via double-click.

- 3) If required, enter your username and password, click "Connect".

- 4) Um die Verbindung zu trennen, klicken Sie diese mit der rechten Maustaste an und wählen „trennen“.

4. Checking your connection status

If the VPN connection to the Shellfire server has been set up correctly, your IP address on the web is replaced by the IP address of the VPN server.

You can check this by following these steps:

- 1) Make sure the VPN connection is disconnected (step 4)
- 2) Visit <http://www.whatsmyip.org/> and note your IP address.

Your IP Address is 123.123.123.123

- 3) Now, connect to the VPN server (step 4)
- 4) Reload the page <http://www.whatsmyip.org/> and check your new IP address.

Your IP Address is 111.111.111.111

In this example, the first IP address is 123.123.123.123 and the second IP address is 111.111.111.111. As both IPs are different from each other, you can tell that your connection is working nicely. If you get the same IP addresses with and without VPN, check your settings or contact our support.
