1. Required data

Setting up a PPTP connection on the iPhone, iPad or iPod touch is quite easy.

You need the following data from your VPN details that can be found in your Shellfire QuickAccess customer center:

- server address
- username
- password

The server address is the address of the Shellfire Server used for connection. Username and password are required for authentication with the PPTP server.

Navigation note: How to find your VPN details

- www.shellfire.net
- Log in to using your customer id or your e-mail address and your password
- Open the QuickAccess customer center bar
- Click on your VPN id (sfxxxxx)
- Your VPN details show up with the required data

Warning: Username and password for your PPTP connection are not the same as the ones for your Shellfire website account!

Warning: In case your VPN is not currently set to PPTP, you have to change the VPN type to PPTP from your customer center, first.

2. Setting up a connection, connecting and disconnecting

PPTP does not require any additional software / app. All you need is a working internet connection.

Follow these steps:

- 1) From the startup screen, choose "Settings"

- 2) General

- 3) Network

IBAN: DE 878 007 002 404 011 714 00
BIC: DEUTDE33HAN

- 6) Choose PPTP and a description (e.g. Shellfire VPN), enter the server address from step 1 under "Server" and the username and password from step 1 as "Account" and "Account password", save.

- 7) Select the newly set up connection and pull the "VPN" slider from 0 to 1.

IBAN: DE 878 007 002 404 011 714 00
BIC: DEUTDE33HAN

- 8) After a few seconds, the VPN connection should show up in the title bar. The screen should then look like this:

- 9) To disconnect from the VPN, just switch back the VPN slider from 1 to 0 (also possible directly from the "settings" menu).

3. Checking your connection status

If the VPN connection to the Shellfire server has been set up correctly, your IP address on the web is replaced by the IP address of the VPN server.

You can check this by following these steps:

- 1) Make sure the VPN connection is disconnected (step 4)
- 2) Visit <http://www.whatsmyip.org/> and note your IP address.

Your IP Address is 123.123.123.123

- 3) Now, connect to the VPN server (step 4)
- 4) Reload the page <http://www.whatsmyip.org/> and check your new IP address.

Your IP Address is 111.111.111.111

In this example, the first IP address is 123.123.123.123 and the second IP address is 111.111.111.111. As both IPs are different from each other, you can tell that your connection is working nicely. If you get the same IP addresses with and without VPN, check your settings or contact our support.
